1. Applicant's election without traverse of "group I comprising claims 1-11" in the reply filed on 19 July 2006 is acknowledged. Accordingly, claims 12-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to one or more non-elected inventions/species, there being no allowable generic or linking claim.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

3. The application has been amended as follows:

a. This application is in condition for allowance except for the presence of claims 12-21 directed to one or more inventions non-elected without traverse.

Accordingly, **claims 12-21 have been cancelled.**

b. Claim 1, line 12, "from cable" has been corrected to read --from the cable--.

4. The drawings were received on 04 December 2003. These drawings are accepted.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. This includes Dimitri et al. (US 6,512,962) and Coffin et al. (US

6,778,351), which each individually teaches a storage library with a retractable communications cable.

6. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach nor suggest the storage library as claimed, wherein a communications cable is routed around a cable mechanism within a module housing with one end of the communications cable being connected with a module robot assembly operable for moving away from the module housing in order to move toward cells and manipulate media elements supported by the cells with the cable mechanism being operable for enabling a portion of the communications cable to be pulled out from the cable mechanism within the module housing as the module robot assembly moves away from the module housing. While Coffin, supra, teaches a retractable communications cable, the communications cable of Coffin is not routed around a cable mechanism. While Dimitri teaches a module having a housing and a retractable communications cable routed around a cable mechanism within the module housing, Dimitri does not teach that the module further comprises a robot assembly operable for moving away from the module housing, that is, the robot assembly is a completely separate component from the module.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
